

Confirmed Java / Angular Developer

JOB DESCRIPTION

Summary

We are looking for experienced Java / Angular Developers to contribute to the development, evolution and maintenance of complex business applications within an Agile environment. The role covers both back-end and front-end development, with a strong focus on code quality, testing, maintainability and reliable delivery.

You will collaborate closely with functional analysts, testers, developers and technical leads to design and implement robust application components while continuously improving existing solutions and development practices.

Mission

- Participate in the technical design of new features in collaboration with functional analysts, the technical lead and other team members.
- Design application components in line with the defined architecture and technical standards.
- Develop and evolve back-end components in Java and front-end components in Angular.
- Apply development best practices with a strong focus on Clean Code, readability, maintainability and performance.
- Identify technical impacts and dependencies involving existing application components.
- Create and maintain unit and integration tests associated with developed functionality.
- Investigate and fix defects and implement functional and technical enhancements.
- Contribute to refactoring activities and continuous improvement of the existing codebase.
- Participate actively in peer code reviews and knowledge sharing within the development team.
- Prepare and deliver developments across the different application environments and validate deployments and releases.
- Follow established delivery processes as well as methodological and technological standards.
- Contribute to reducing technical debt through refactoring and upgrades of libraries and frameworks.
- Collaborate daily with developers, analysts, testers and other project stakeholders.
- Participate in Scrum ceremonies, communicate technical risks and blockers, and document developments when required.

Key Skills

- Confirmed professional experience as a Java / Angular application developer.
- Confirmed Java development skills, including experience with enterprise Java environments and modern Java versions.
- Confirmed experience with Spring / Spring Boot and JPA.
- Confirmed Angular experience; knowledge of recent Angular versions and Angular Material is highly valued.

- Experience with front-end state management such as NgRx.
- Confirmed knowledge of REST APIs and OpenAPI.
- Confirmed experience with DB2 and/or MySQL relational databases.
- Experience with Flyway for database migrations and versioning.
- Confirmed experience with unit testing frameworks such as JUnit and Mockito.
- Confirmed CI/CD and deployment experience, including Docker.
- Good knowledge of Apache Maven, Git / GitLab CI/CD and artifact repositories such as Nexus.
- Knowledge of IndexedDB, Dexie and Service Workers is an asset, particularly for online/offline web application scenarios.
- Confirmed experience working in Scrum / Agile delivery teams.
- Strong commitment to software quality, testing, code reviews and technical debt reduction.
- Ability to work collaboratively and communicate clearly with technical and functional stakeholders.
- Native or fully professional proficiency in French is required.
